	Database reference:	**IWD-CIL4HOTEL.fm**

1 General

ASB 150 can be connected via one or two serial V.24 interface(s)to peripheral (external) computer/PC or printer for transmission of inter alia:

- Registration of call data (Call Information Logging, CIL).
- Registration and activation of facilities for hotel applications.

For this transmission of information between ASB150 and a peripherally connected unit there exist a number of INFORMATION FORMATS compiled for the following messages:

- CALL data to a peripherally connected printer.
- CALL data to a peripherally connected computer/PC.
- CALL and HOTEL data to a peripherally connected printer.
- CALL and HOTEL data to a peripherally connected computer/PC.
- HOTEL data from a peripherally connected computer/PC.

Command 6403 is utilised to state the INFORMATION FORMAT that is required (is necessary) for interworking with the peripherally connected unit.

All information data (characters) are ASCII standard characters.
==

2 INFORMATION FORMAT CIL4

Below is described the INFORMATION FORMAT "CIL4" which is one of the formats that have been compiled for transmission of information between ASB150 and a peripherally connected computer.

The introduction of Least cost routing and ISDN causes the changes from CILHOTEL to CIL2 FORMAT. The CIL2 FORMAT is the CILHOTEL format with additional fields. (Information state I, Costs, Cost state, Trunk number, Sent number, Dialled access code, Sent access code).
The change between CIL2 format and the CIL3 format is an additional field 'A-number'.
The change between CIL3 format and the CIL4 format are two additional field 'Call via facility'and 'Transfer condition'.

2.1 DATA FROM ASB150 TO A PERIPHERALLY CONNECTED COMPUTER/PC

2.1.1 CALL DATA to a peripherally connected computer/PC

Description of format "CIL4" for transmission of call data from ASB150 to a peripherally connected computer/PC.

2.1.1.1 CALL INFORMATION LOGGING: Format 10 'CIL4 FORMAT'

The format for transmission of call data "CALL INFORMATION LOGGING" from ASB150 to a peripherally connected "CIL-computer/PC"

DESCRIPTIONS OF FIELDS

MESSAGE CODE   (Characters 1 - 2)
2-characters identification code for relevant message: CALL DATA = 00

SEQUENCE NUMBER   (Characters 4 - 6)
3-digit sequence number for message from 001 - 999. Right adjusted with (possibly) introductory zeros.

CALL DATE   (Characters 8 - 13)
Year, month and day when call was terminated. Two digits for year and two digits for month followed by two digits for day.

END TIME   (Characters 15 - 18)
Hour and minute when call was terminated (24 hour clock). Two digits for hour followed by two digits for minute.

CALLER'S NUMBER   (Characters 20 - 23)
4-digit field containing caller's number. Left adjusted with (possibly) subsequent spaces.

CALL DURATION   (Characters 25 - 29)
5-digit field containing call duration expressed in hours, minutes and seconds. One digit for hour followed by two digits for minutes and two digits for seconds. (Maximum 9 hours, 59 minutes and 59 sec.) (No call duration is stated solely with spaces).

METER PULSES   (Characters 31 - 34)
4-digit field that states quantity of received meter pulses within the range 0 - 9999. Right adjusted with (possibly) introductory spaces.

DIALLED ACCESS NUMBER (Characters 36 - 39)
4 digit field containing the dialled route access number of the trunk lines. Left adjusted with (possibly) subsequent spaces.

DIALLED NUMBER   (Characters 41 - 64)
24-digit field containing dialled number. Left adjusted with (possibly) subsequent spaces.

INFORMATION STATUS II (Character 66)
One character for status information with following ASCII values:

EXTERNAL CALL:
==============
```
            Char:     status inf:
            -----     -----------
            a (61h) = OUTGOING.
```

          j (6Ah) = Outgoing, set up with recall on trunk and
                    set up to a conference call.
          k (6Bh) = Outgoing, set up with recall on trunk and
                    with an extrem long duration (sub-record).
          l (6Ch) = Outgoing, set up with recall on trunk and
                    set up to a conference call and
                    with an extrem long duration (sub-record).

          m (6Dh) = Spare. n (6Eh) = Spare. o (6Fh) = Spare.  p (60h) = Spare.

          1 (31h) = Outgoing, set up with DISA.
          3 (33h) = Outgoing, set up with DISA and
                    with an extrem long duration (sub-record).
          4 (34h) = Outgoing, set up with EXTERNAL DIVERSION.
          6 (36h) = Outgoing, set up with EXTERNAL DIVERSION and
                    with an extrem long duration (sub-record).
          8 (38h) = Outgoing, set up with CTI

          A (41h) = INCOMING.
          B (42h) = Incoming, set up to a conference call.
          C (43h) = Incoming, with an extrem long duration (sub-record).
          D (44h) = Incoming, set up to a conference call and
                    with an extrem long duration (sub-record).
          E (45h) = Incoming, SET UP WITH OPERATOR ASSISTANCE.
          F (46h) = Incoming, set up with operator assistance and
                    set up to a conference call.
          G (47h) = Incoming, set up with operator assistance and
                    with an extrem long duration (sub-record).
          H (48h) = Incoming, set up with operator assistance and
                    set up to a conference call and
                    with an extrem long duration (sub-record).

          I (49h) = Spare. J (4Ah) = Spare. K (4Bh) = Spare. L (4Ch) = Spare.
          M (4Dh) = Spare. N (4Eh) = Spare. O (4Fh) = Spare. P (50h) = Spare.

   INTERNAL CALL:
   ==============
          Char:        status inf:
          -----        -----------
          Q (51h) = INTERNAL.
          R (52h) = Internal, set up to a conference call.
          S (53h) = Internal, with an extrem long duration (sub-record).
          T (54h) = Internal, set up to a conference call and
                       with an extrem long duration (sub-record).
```

] (5Dh) = Spare.
^ (5Eh) = Spare.
_ (5Fh) = Spare.
` (60h) = Spare.
```

ACCOUNT CODE   (Character 68 - 82)
15-digit field that contains the stated account code. Left adjusted with (possibly) subsequent spaces. (If no account code is used the field will consist of spaces).

AUTHORISATION CODE   (Character 84 - 87)
When authorisation code is used, for outgoing calls, this 4-digit field will contain the directory number of the extension telephone via which the call is conducted. Left adjusted with (possibly) subsequent spaces. (The directory number to which the authorisation code belongs is then stated in field for "caller's number", characters 20 - 23).(If no authorisation code is used the field will consist of spaces).

QUEUE TIME, ANSWER   (Character 89 - 92)
Queue time is the period a call waits for a first answer. The queue time is expressed in 2 digits for minutes followed by two digits for seconds.

INFORMATION STATE I: (Character 94)
Header information for type of call. One character for state information with following ASCII values:

```
CHAR:      STATUS INFO:
 a         Outgoing
 m         Outgoing with LCR
 n         CN - call (*)
 A         Incoming
 Q         Internal
```
(*)CN-call: Originator can either be in the own exchange or in the CN-network.

COSTS: (Character 96 - 106)
11-digit field that state the value of costs with the range of 0 - 99999999999. The cost is an ascii-string with decimal notation. Right adjusted with (possible) introductory space.

COST STATE: (Character 108)
One character for cost state information with following ASCII values:

```
CHAR:      INFO:
 I         The 'cost of the call' is calculeted
           internally by ASB15002.
 E         The 'cost of the call' is received from
           network.
```

	Database reference:	**IWD-CIL4HOTEL.fm**

```
TRUNK NUMBER:          (Character 110 - 113)
4-digit field containing the directory number of the seized trunk line.

SENT ACCESS NUMBER:  (Character 115 - 118)
4 digit field containing the selected route access number of the trunk lines.

SENT NUMBER:           (Character 120 - 143)
For outgoing calls:
     24-digit field containing the sent number. If least cost routing will not be
     used this field has the same contents as the 'Dialled number' field.
For incoming calls:
     The field containing the dialled digits from an external caller during an
     incoming facility call (e.g. automated attendant).
The digits are left adjusted with (possible) subsequent spaces.

A - NUMBER:            (Character 145 - 164)
20-digit field containing the A - number.Left adjusted with (possible) subsequent
spaces.

CALL VIA FACILITY:    (Character 166)
One character for CALL VIA FACILITY information with following ASCII values:
If a call was transferred from an incoming ACD or AA call the charater will be
set according the following values.

                    CHAR:      INFO:
                     C         Call via Automatic Call Distribution
                     D         Call via Automated Attendant

TRANSFER CONDITION:  (Character 168-169)
Two characters for TRANSFER CONDITION information with following ASCII values:
If an incoming ACD or AA call is transferred or released the characters will be
set according the following values.

            CHAR:      INFO:
            11         Call transferred to desired extension or valid entry
            12         Call transferred to exit position(invalid entry or timeout)
            13         External caller released the call
            14         Call transferred to exit position (extension busy)
```

2.1.2 HOTEL DATA to a peripherally connected computer/PC

```
Description of format "CIL4" for transmission of hotel data from ASB150 to a
peripherally connected computer/PC.
```

2.1.2.1 Hotel data "CHECK IN"

```
The format for transmission of hotel data "CHECK IN" from ASB150 to a peripherally
connected "CIL-computer/PC"
```

<u>DESCRIPTIONS OF FIELDS</u>

```
MESSAGE CODE        (Characters 1 - 2)
2-characters identification code for relevant message: CHECK IN = 10

SEQUENCE NUMBER     (Characters 4 - 6)
3-digit sequence number for message from 001 - 999. Right adjusted with (possibly)
introductory zeros.

CURRENT DATE        (Characters 8 - 13)
Current year, month and date when the message was sent. Two digits for year and two
digits for month followed by two digits for day.

CURRENT TIME        (Characters 15 - 18)
Current hour and minute when the message was sent. Two digits for hour followed by
two digits for minute.

ROOM NUMBER         (Characters 20 - 23)
4-digit field that states relevant room number. Left adjusted with (possibly)
subsequent spaces.

GUEST NAME          (Characters 25 - 59)
```

	Database reference:	**IWD-CIL4HOTEL.fm**

Field with room for 35 characters for relevant guest name. Left adjusted with (possibly) subsequent spaces.

CHECK IN DATE   (Characters 61 - 66)
Year, month and date for check in. Two digits for year and two digits for month followed by two digits for day.

CHECK OUT DATE   (Characters 68 - 73)
Year, month and date for check out. Two digits for year and two digits for month followed by two digits for day.

LANGUAGE   (Characters 75 - 77)
3-digit field, right adjusted with (possibly) introductory zeros, that states appropriate language for guest:

```
        000 = Not used
        001 = English
        002 = Swedish
        003 = Finnish
        004 = Italian
        005 = French
        006 = German
        007 = Japanese
        008 = Chinese

        010 = Danish
        011 = Spanish
        012 = Dutch
        013 = Portuguese
        014 = Greek
        015 = Arabic
        016 = Icelandic
        017 = Russian
        018 = Hungarian
        019 = Polish
        020 = Slovakian
        021 = Slovenian
        022 = Estonia
        023 = Czech Republic
        >023 = Spare

        SPACE (20h) = no language
```

CREDIT INFORMATION   (Character 79)
1-digit that states guest's credit status:

```
        00 = Non-VIP
        01 = VIP (Very Important Person)
        02 = Master Card/ Charge
        03 = American Express (normal)
        04 = American Express (gold)
        05 = American Express (platinum)
        06 = Diners Club
        07 = VISA
        08 = EURO
        >08 = Spare

        SPACE (20h) = no credit information
```

   SEQUENCE NUMBER     (Characters 4 - 6)
   3-digit sequence number for message from 001 - 999. Right adjusted with (possibly)
   introductory zeros.

   CURRENT DATE        (Characters 8 - 13)
```

Uppgjord/Prepared		Faktaansvarig/Subject responsible	Dokumentnr/Document number		
			4/155 19-11/ ASB 150 02		
Dokansv/Godkänd - Doc respons/Approved		Kontr/Checked	Datum/Date	Rev	Tillhör/Referens-File/Reference
			2001-05-15	**A**	

	Database reference:	**IWD-CIL4HOTEL.fm**

Current year, month and date when the message was sent. Two digits for year and two digits for month followed by two digits for day.

CURRENT TIME   (Characters 15 - 18)
Current hour and minute when the message was sent. Two digits for hour followed by two digits for minute.

ROOM NUMBER   (Characters 20 - 23)
4-digit field that states relevant room number. Left adjusted with (possibly) subsequent spaces.

GUEST NAME   (Characters 25 - 59)
Field with room for 35 characters for relevant guest name. Left adjusted with (possibly) subsequent spaces.

CHECK IN DATE   (Characters 61 - 66)
Year, month and date for check in. Two digits for year and two digits for month followed by two digits for day.

CHECK OUT DATE   (Characters 68 - 73)
Year, month and date for check out. Two digits for year and two digits for month followed by two digits for day.

LANGUAGE   (Characters 75 - 77)
3-digit field, right adjusted with (possibly) introductory zeros, that states appropriate language for guest:

```
        000 = Not used
        001 = English
        002 = Swedish
        003 = Finnish
        004 = Italian
        005 = French
        006 = German
        007 = Japanese
        008 = Chinese
        009 = Norwegian
        010 = Danish
        011 = Spanish
        012 = Dutch
        013 = Portuguese
        014 = Greek
        015 = Arabic
        016 = Icelandic
        017 = Russian
        018 = Hungarian
        019 = Polish
        020 = Slovakian
        021 = Slovenian
        022 = Estonia
        023 = Czech Republic
        >023 = Spare

        SPACE (20h) = no language
```

CREDIT INFORMATION   (Character 79)
1-digit that states guest's credit status:

DESCRIPTIONS OF FIELDS

MESSAGE CODE   (Characters 1 - 2)
2-characters identification code for relevant message: UPDATE-GUEST DATA = 30

SEQUENCE NUMBER   (Characters 4 - 6)
3-digit sequence number for message from 001 - 999. Right adjusted with (possibly) introductory zeros.

CURRENT DATE   (Characters 8 - 13)
Current year, month and date when the message was sent. Two digits for year and two digits for month followed by two digits for day.

CURRENT TIME   (Characters 15 - 18)
Current hour and minute when the message was sent. Two digits for hour followed by two digits for minute.

ROOM NUMBER   (Characters 20 - 23)
4-digit field that states relevant room number. Left adjusted with (possibly) subsequent spaces.

GUEST NAME   (Characters 25 - 59)
Field with room for 35 characters for relevant guest name. Left adjusted with (possibly) subsequent spaces.
CHECK IN DATE   (Characters 61 - 66)
Year, month and date for check in. Two digits for year and two digits for month followed by two digits for day.

CHECK OUT DATE   (Characters 68 - 73)
Year, month and date for check out.Two digits for year and two digits for month followed by two digits for day.

LANGUAGE   (Characters 75 - 77)
3-digit field, right adjusted with (possibly) introductory zeros, that states appropriate language for guest:

              000 = Not used

3-digit sequence number for message from 001 - 999. Right adjusted with (possibly)
introductory zeros.

CURRENT DATE          (Characters 8 - 13)
Current year, month and date when the message was sent. Two digits for year and two
digits for month followed by two digits for day.

CURRENT TIME          (Characters 15 - 18)
Current hour and minute when the message was sent. Two digits for hour followed by
two digits for minute.

ROOM NUMBER           (Characters 20 - 23)
4-digit field that states relevant room number. Left adjusted with (possibly)
subsequent spaces.

ROOM STATUS           (Characters 83 - 86)
4-digit field that states current room status. Left adjusted with (possibly)
subsequent spaces.

                    0 = Room cleaned.
                    1 = Room not cleaned.
                    2 = Room cleaned and checked.

DESCRIPTIONS OF FIELDS

MESSAGE CODE   (Characters 1 - 2)
2-characters identification code for relevant message: GUEST DATA = 52

SEQUENCE NUMBER   (Characters 4 - 6)
3-digit sequence number for message from 001 - 999. Right adjusted with (possibly) introductory zeros.

CURRENT DATE   (Characters 8 - 13)
Current year, month and date when the message was sent. Two digits for year and two digits for month followed by two digits for day.

CURRENT TIME   (Characters 15 - 18)
Current hour and minute when the message was sent. Two digits for hour followed by two digits for minute.

ROOM NUMBER   (Characters 20 - 23)
4-digit field that states relevant room number. Left adjusted with (possibly) subsequent spaces. No valid room number (only spaces) is equal with "guest data for all room numbers are sent, no more guests" and then there is no further data valid (char. 25 - 95)

GUEST NAME   (Characters 25 - 59)
Field with room for 35 characters for relevant guest name. Left adjusted with (possibly) subsequent spaces.

CHECK IN DATE   (Characters 61 - 66)
Year, month and date for check in. Two digits for year and two digits for month followed by two digits for day.

CHECK OUT DATE   (Characters 68 - 73)
Year, month and date for check out.
Two digits for year and two digits for month followed by two digits for day.

LANGUAGE   (Characters 75 - 77)

3-digit field, right adjusted with (possibly) introductory zeros, that states appropriate language for guest:

```
        000 = Not used
        001 = English
        002 = Swedish
        003 = Finnish
        004 = Italian
        005 = French
        006 = German
        007 = Japanese
        008 = Chinese
        009 = Norwegian
        010 = Danish
        011 = Spanish
        012 = Dutch
        013 = Portuguese
        014 = Greek
        015 = Arabic
        016 = Icelandic
        017 = Russian
        018 = Hungarian
        019 = Polish
        020 = Slovakian
        021 = Slovenian
        022 = Estonia
        023 = Czech Republic
        >023 = Spare
        SPACE (20h) = no language
```

CREDIT INFORMATION   (Character 79)
1-digit that states guest's credit status:

```
        00 = Non-VIP
        01 = VIP (Very Important Person)
        02 = Master Card/ Charge
        03 = American Express (normal)
        04 = American Express (gold)
        05 = American Express (platinum)
        06 = Diners Club
        07 = VISA
        08 = EURO
        >08 = Spare

        SPACE (20h) = no credit information
```

ROOM STATUS   (Characters 83 - 86)
4-digit field that states current room status. Left adjusted with (possibly) subsequent spaces.

```
        0 = Room cleaned.
        1 = Room not cleaned.
        2 = Room cleaned and checked.
        3 = Room not available.
        >3 = Spare
```

WAKE-UP TIME   (Characters 88 - 91)

		Dok. namn/ Document name	Sida/ Page
		Interwork Description	**28(47)**
Uppgjord/Prepared	Faktaansvarig/Subject responsible	Dokumentnr/Document number	
		4/155 19-11/ ASB 150 02	
Dokansv/Godkänd - Doc respons/Approved	Kontr/Checked	Datum/Date Rev	Tillhör/Referens-File/Reference
		2001-05-15 A	

	Database reference:	**IWD-CIL4HOTEL.fm**

Relevant wake-up time in hour and minute (24 hour clock) but only included if active wake-up (wake-up ordered but not answered). Two digits for hour followed by two digits for minute or if inactive wake-up, four spaces.

WAKE-UP STATUS   (Character 93)
1-digit that states guest's wake-up status but only valid if the wake-up time is valid.

```
                    0 = Guest ordered wake-up call.
                    1 = Administration ordered wake-up call.
                    >2 = Spare
```

BAR/UNBAR STATUS   (Character 95)
1-digit that states guest's telephone bar/unbar status:

```
                    0 = Guest's telephone is barred.
                    1 = Guest's telephone is unbarred.
                    >1 = Spare
```

RTR/DID STATUS   (Characters 97 - 98)
2 digits that states the guest's RTR/DID barring status.

```
              00 ... RTR and DID blocked
              01 ... RTR blocked, DID allowed
              10 ... RTR allowed, DID blocked
              11 ... RTR and DID allowed
```

DESCRIPTIONS OF FIELDS

MESSAGE CODE   (Characters 1 - 2)
2-characters identification code for relevant message: RTR/DID BARRING STATUS = 45

SEQUENCE NUMBER   (Characters 4 - 6)
3-digit sequence number for message from 001 - 999. Right adjusted with (possibly) introductory zeros.

CURRENT DATE   (Characters 8 - 13)
Current year, month and date when the message was sent.Two digits for year and two digits for month followed by two digits for day.

CURRENT TIME   (Characters 15 - 18)
Current hour and minute when the message was sent. Two digits for hour followed by two digits for minute.

ROOM NUMBER   (Characters 20 - 23)
4-digit field that states relevant room number. Left adjusted with (possibly) subsequent spaces.

RTR/DID STATUS   (Characters 25 - 26)
2 digits that states the guest's or exchange's RTR/DID barring status.
individual (ROOM NUMBER matters):

                    00 ... RTR and DID blocked
                    01 ... RTR blocked, DID allowed
                    10 ... RTR allowed, DID blocked
                    11 ... RTR and DID allowed

general (ROOM NUMBER does not matter):
                    22 ... RTR and DID blocked
                    23 ... RTR blocked, DID allowed
                    32 ... RTR allowed, DID blocked
                    33 ... RTR and DID allowed

DESCRIPTIONS OF FIELDS

MESSAGE CODE   (Characters 1 - 2)
2-characters identification code for relevant message: CHECK OUT = 60

SEQUENCE NUMBER   (Characters 4 - 6)
3-digit sequence number for message from 001 - 999. Right adjusted with (possibly)
introductory zeros.

CURRENT DATE   (Characters 8 - 13)
Current year, month and date when the message was sent. Two digits for year and two
digits for month followed by two digits for day.

CURRENT TIME   (Characters 15 - 18)
Current hour and minute when the message was sent. Two digits for hour followed by
two digits for minute.

ROOM NUMBER   (Characters 20 - 23)
4-digit field that states relevant room number. Left adjusted with (possibly)
subsequent spaces.

GUEST NAME   (Characters 25 - 59)
Field with room for 35 characters for relevant guest name. Left adjusted with
(possibly) subsequent spaces.

CHECK IN DATE   (Characters 61 - 66)
Year, month and date for check in. Two digits for year and two digits for month
followed by two digits for day.

CHECK OUT DATE   (Characters 68 - 73)
Year, month and date for check out. Two digits for year and two digits for month
followed by two digits for day.

LANGUAGE   (Characters 75 - 77)
3-digit field, right adjusted with (possibly) introductory zeros, that states
appropriate language for guest:

        000 = Not used

```
          001 = English
          002 = Swedish
          003 = Finnish
          004 = Italian
          005 = French
          006 = German
          007 = Japanese
          008 = Chinese
          009 = Norwegian
          010 = Danish
          011 = Spanish
          012 = Dutch
          013 = Portuguese
          014 = Greek
          015 = Arabic
          016 = Icelandic
          017 = Russian
          018 = Hungarian
          019 = Polish
          020 = Slovakian
          021 = Slovenian
          022 = Estonia
          023 = Czech Republic
          >023 = Spare

CREDIT INFORMATION    (Character 79)
1-digit that states guest's credit status:

          00 = Non-VIP
          01 = VIP (Very Important Person)
          02 = Master Card/ Charge
          03 = American Express (normal)
          04 = American Express (gold)
          05 = American Express (platinum)
          06 = Diners Club
          07 = VISA
          08 = EURO
          >08 = Spare

GUEST STATUS          (Character 81)
1-digit that states status of guest's (if any) handicap:

             0 = No handicap
             1 = Handicapped.
             >1 = Spare.

		2001-05-15	**A**	

Database reference: **IWD-CIL4HOTEL.fm**

Current year, month and date when the message was sent. Two digits for year and two digits for month followed by two digits for day.

CURRENT TIME   (Characters 15 - 18)
Current hour and minute when the message was sent. Two digits for hour followed by two digits for minute.

ROOM NUMBER   (Characters 20 - 23)
4-digit field that states relevant room number. Left adjusted with (possibly) subsequent spaces.

GUEST NAME   (Characters 25 - 59)
Field with room for 35 characters for relevant guest name. Left adjusted with (possibly) subsequent spaces.

CHECK IN DATE   (Characters 61 - 66)
Year, month and date for check in. Two digits for year and two digits for month followed by two digits for day.

CHECK OUT DATE   (Characters 68 - 73)
Year, month and date for check out. Two digits for year and two digits for month followed by two digits for day.

LANGUAGE   (Characters 75 - 77)
3-digit field, right adjusted with (possibly) introductory zeros, that states appropriate language for guest:

```
000 = Not used
001 = English
002 = Swedish
003 = Finnish
004 = Italian
005 = French
006 = German
007 = Japanese
008 = Chinese
009 = Norwegian
010 = Danish
011 = Spanish
012 = Dutch
013 = Portuguese
014 = Greek
015 = Arabic
016 = Icelandic
017 = Russian
018 = Hungarian
019 = Polish
020 = Slovakian
021 = Slovenian
022 = Estonia
023 = Czech Republic
>023 = Spare
```

CREDIT INFORMATION   (Character 79)
1-digit that states guest's credit status:

```
00 = Non-VIP
01 = VIP (Very Important Person)
02 = Master Card/ Charge
```
